

## ***7003/7103 – 3 Station Battery Operate Controllers***

---

Galcon is again expanding its product line and brings a 3 station option to its beautifully designed 7000 Series battery operated controllers. No power? No problem. These three station controller, paired with either ¾” or 1” DC inline valves are an ideal solution for automated operation of a drip, pop-up or rotor based system.

A single 9 Volt battery is needed for this controller to operate 1, 2 or 3 valves. The 7003 version is a water resistant outdoor model while the 7103 version is completely waterproof and ready to tackle the most demanding site condition.

Both 7003 and 7103 products offer unique EZ connectors that make the need to mess with silicone filled wire nuts a thing of the past. Once snapped together and threaded in place, these long lasting waterproof wire connectors will make you wonder why it took so long for someone to figure this out.

The 7003/7103 battery operated irrigation controller delivers ease of programming and user flexibility. Independent station programming provides up to four start time per day/per valve or operation in cycles while keeping programming of each valve independent of the other.

The 7003/7103 are available in kit form (controller + 3 inline DC valves in ¾” or 1”) or in separate SKUs (controller + 1 inline DC valve in ¾” or 1” and additional DC valves separately.)
