## 2<sup>nd</sup> Edition, September 2011

### Meet Friendly!

Have you met Friendly?

Friendly is the star of our new environment campaign that was created to increase awareness in Galcon's environment-friendly products. Get to know Friendly and learn more about our Smart Irrigation solutions at

<http://galconc.com/friendly/>

### Register to the Galcon Technician Seminar

We are just wrapping up our latest seminar for Master Technicians so now's the ideal time to register for our next quarterly seminar in November! The Seminar offers hands-on training on our irrigation systems and in-depth training of our various products. Seminar graduates are awarded a Galcon Certified Technician certificate and are authorized to install and provide technical support for all Galcon systems. To register or find out more, contact your Regional Manager at <http://galconc.com/contact-us/>

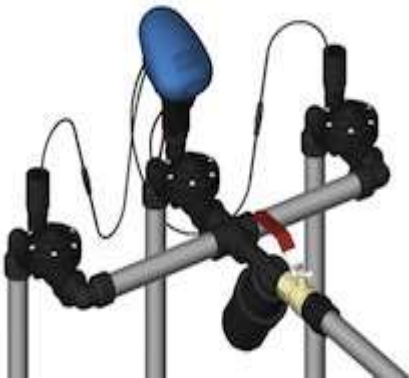

### Learn About Our New Products

We are proud to present the 7101 and 7003, two new and innovative products that complete our bestselling 7000 Series.

**7101** is our new advanced IP68-compliant, in line, battery-operated, irrigation controller; it is designed especially for underground installation in valve boxes.

**7003**, Galcon's newly released controller, was designed to complement the 7000 family. It has all the same technical functionalities in addition to operating up to 3 valves in independent or sequential programming. The 7003 requires no wiring and features fast waterproof connectors between the controller and valve solenoid.

We've also just released the **Gal2Way** – our new 2 way radio system for long reach, agriculture applications. The Gal2Way demonstrates the higher availability in the noisiest radio environment.

The system consists of field units (RTU's), a concentrator that connects to the Galileo controller, a repeater that can be used to increase the distance between the controller and the field units and several types of antenna configurations can be used to achieve long distances and best performance.
