## GalcoNews

### 6<sup>th</sup> Edition, November 2012

Galcon is continually expanding its well-known product line, and has just released some new products:

1. Joining our admired 7000 family is the **7103**, This controller has all the same technical abilities of the fully waterproof 7101 controller. In addition to operating up to 3 valves in independent or sequential programming, the 7103 requires no wiring, and features fast waterproof connectors between the controller and valve solenoid. For more information [click here](#)

2. The **ACGQ 8200** is the outdoor addition for our excellent ACGQ series, controlling up to 8 valves. The ACGQ 8200 is made especially for out-door installations. For more information [click here](#)

3. Our **GSI** easy-to-use, web-based irrigation controller is now available in it's AC version, with an option for controlling up to 24 valves. The controller enables the user to remotely schedule landscape irrigation, from any web-connected computer and/or Smartphone! GSI is ideal for any type of landscape, as it allows simple irrigation from the controller or from any location with web access.

GSI can be adjusted to fit a variety of landscape types and number of stations. Based on advanced irrigation technology, GSI can identify system leaks and malfunctions, enabling significant reduction in water loss and costs. For more information [click here](#)

### **Once again it's been an exciting November for Galcon!**

November marked an exciting and busy month for Galcon's events team, which participated in 3 different trade shows in 3 different countries. Show participants were able to visit Galcon's booth in The IA Show, in Orlando, Florida; USA, Expo Agroalimentaria in Guanajuato Mexico; and The EIMA show in Bologna, Italy.

We would like to take this opportunity to thank all our partners and visitors – we hope to enjoy a fruitful cooperation for many years to come!
